Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

09/918,688

Applicant(s)

TERES, MARCOS

Examiner

Yixing Qin

Art Unit

2622

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 30 July 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 July 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

I. Claims 1-5, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Hamilton et al (U.S. Patent No. 5,200,958 – “Hamilton”).

#### **1. Claim 1**

**A computer-implemented method for diagnosing a malfunction in a printer system using a computer system comprising a processor, the method comprising the steps of:**

- **communicating a description of one or more symptoms of the printer system malfunction to the processor;**
- Hamilton discloses in column 8, lines 3-15 discloses that a controller section 7 monitors faults and provides the capabilities to enable an online diagnostic. The controller can identify faults that occur through communication with an electronic reprographic system (column 7, line 57).
- **correlating the one or more symptoms with known printer system malfunctions;**

Art Unit: 2622

- Hamilton discloses in column 8, lines 18-22 that the diagnostics identify and evaluate faults that can occur within various parts of the system.
- **identifying a most appropriate malfunction that would produce the described symptoms; and**
- Hamilton discloses in column 9, lines 30-57 various steps taken in more accurately identifying the fault(s) that occurred. Lines 40-48 especially, tries to isolate which part of the system this fault is in. Also see column 10, lines 29-33.
- **reporting the most appropriate malfunction.**
- Also note that in column 8, lines 3-7 that the controller section monitors and "...determines which specific actions will be triggered by the specific faults..."  
This indicates that Hamilton's system has the ability to pinpoint faults (i.e. **most appropriate**). Column 8, lines 59-63 discloses the reporting of the fault(s) to the user.

## 2. Claim 2

The method of claim 1, where

- **the description of the one or more symptoms includes an error log recorded by the printer system.**
- Hamilton discloses in column 7, lines 65-68, that faults are recorded in a fault log.

## 3. Claim 3

The method of claim 2, where

Art Unit: 2622

- **the printer system includes a printer input device, and the error log includes input device errors.**
- Hamilton discloses in column 8, lines 18-22 that the diagnostic can identify faults within the "...image input, image output, and image manipulation services."

**4. Claim 4**

**The method of claim 3, where**

- **the printer system includes a printer output device, and the error log includes output device errors.**
- Please see claim 3 above.

**5. Claim 5**

**The method of claim 1, where**

- **the description of one or more symptoms of the printer system malfunction is received from the printer system.**
- Hamilton discloses in column 8, lines 3-15 discloses that a controller section 7 monitors faults and provides the capabilities to enable an online diagnostic. The controller can identify faults that occur through communication with an electronic reprographic system (column 7, line 57). The monitoring of the system means that the faults that occurred are received from the system.

**7. Claim 7**

**The method of claim 1, where**

- **the step of communicating includes sending a query from the processor to the printer system and receiving descriptions of one or more symptoms of the printer system malfunction from the printer system.**
- Again, Hamilton discloses in column 8, lines 3-15 discloses that a controller section 7 monitors faults and provides the capabilities to enable an online diagnostic.

**8. Claim 8**

**The method of claim 1, where**

- **the step of reporting includes electronically transmitting a report.**
- Hamilton discloses in column 8, lines 22-28 that a software client provides the means for relaying information.

II. Claims 13-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Maekawa et al (U.S. Patent No. 5,386,271 – “Maekawa”).

**13. Claim 13**

**A system for diagnosing a malfunction in a printer system, comprising:**

- **a database correlating symptoms of printer system malfunctions with known printer system malfunctions; and**

- Maekawa discloses in Fig. 25 a chart disclosing various conditions and measures to be taken to alleviate those conditions.
- **a processor configured to collect a description of one or more symptoms of a present printer system malfunction to compare the one or more symptoms of a present printer system malfunction to the database correlations, to identify a most appropriate malfunction that would produce the described symptoms, and to report the most appropriate malfunction.**
- Maekawa discloses in Fig. 16 the processing of a CPU in the “center” of the control system (column 2, lines 64-65).
- Column 11, lines, 51-58 and column 12, lines 1-50 discloses the various processing that can occur. Column 12, lines 47-62, especially, discloses the cause of trouble (i.e. can read on **description of symptoms**), possibilities and measures to be taken are displayed (i.e. **most appropriate malfunctions are reported to user**).

#### 14. Claim 14

The system of claim 13, where

- **the processor is directly or indirectly linked to the printer system.**
- As discussed in claim 13, the CPU is in the “center” which is linked to the system through a telephone network.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

III. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hamilton et al (U.S. Patent No. 5,200,958 – “Hamilton”) and in view of the applicant’s submitted prior art in the specification (“Background”).

**6. Claim 6**

**The method of claim 1, where**

- **the description of one or more symptoms of the printer system malfunction is received from the printer system operator.**
- Although the Hamilton reference discloses the diagnosing of errors using a program, it does not explicitly disclose the reporting of the symptoms from a user. However, the Background discloses in page 1, lines 14-16 that a user can be solicited for a description of printer malfunctions.
- Both references are in the art of error reporting and diagnosis in a printing environment. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have a user report printer malfunctions. The motivation would be to provide another means in which information regarding a

malfunction can be obtained.

IV. Claims 9-12, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hamilton et al (U.S. Patent No. 5,200,958 – “Hamilton”) and in view of Maekawa et al (U.S. Patent No. 5,386,271 – “Maekawa”).

9. **Claim 9**

The method of claim 8, where

- **the report is electronically transmitted via a communications connection with a printer service facility.**
- Although Hamilton disclose the reporting of errors to a user, it does not explicitly disclose that the report can be sent to a service facility. However, the secondary reference, Maekawa, discloses in Fig. 7 and column 7, lines 21-24 that trouble data (i.e. error report) maybe transferred to a center. This “center” can be read on a **service facility**. Please also note Figs. 1-3 and column 3, lines 43 – 60 for description of the “user” and “center” sides.
- Both references are in the art of error reporting and diagnosis in a printing environment. This will serve as the motivation for the combination of these two references from hereon. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to report errors to a service facility. The motivation would be to enable technicians to see/diagnose problems

remotely.

#### **10. Claim 10**

**The method of claim 9, where**

- **the report includes a service procedure recommendation.**
- Hamilton does not disclose that a service procedure recommendation is included in a report. However, Maekawa, discloses in column 4, lines 35-38, that there is a PM counter that keeps track of part usage, and if the parts need replacement. Please also note Figs 22 and 25 in which "measure to be taken" is provided with errors that have occurred.
- One skilled in the art would understand that one can simply note information from this counter if a part replacement would be a likely solution to a malfunction.

#### **11. Claim 11**

**The method of claim 10, where**

- **the service procedure is a part replacement.**
- See claim 10 above.

#### **12. Claim 12**

**The method of claim 1, where**

- **the processor is accessible via an Internet connection.**

- Hamilton does not explicitly disclose that there is an internet connection in his system. However, from claim 9 above, Maekawa discloses the use of a telephone network as a means of communication. One of ordinary skill knows that the Internet is a well-known means of communication that could be accessed using a plurality of devices.

**19. Claim 19**

**A computer-implemented method of enabling the user of a printer system to diagnose a malfunction of the printer system using a processor, the method comprising the steps of:**

- **communicating a description of one or more symptoms of the malfunction to the processor;**
- **comparing the described symptoms to a database correlating symptoms with known printer system malfunctions;**
- **identifying the malfunction most likely to produce the described symptoms; and**
- **reporting the most likely malfunction to the user.**
- This claim is essentially the same as claim 1, with the exception of the second limitation which uses a database. As mentioned above, in the rejection to claim 13, the Maekawa reference discloses the use of a database for comparing errors. Please see claim 1 for the motivation for the combination of the Hamilton and Maekawa references.

**20. Claim 20**

**The computer-implemented method of claim 19, where**

- **the processor is directly or indirectly linked to the printer system, and the description of one or more symptoms of the malfunction is a printer system error log.**
- **Hamilton discloses the monitoring of the printing system as discussed in claim 1 above. In order to monitor, one knows that there has to be some connection (i.e. direct or indirect link).**

**V. Claims 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maekawa et al (U.S. Patent No. 5,386,271 – “Maekawa”) in view of Hamilton et al (U.S. Patent No. 5,200,958 – “Hamilton”).**

**15. Claim 15**

**The system of claim 14, where**

- **the printer system is configured to record an error log, and where collection of the description of one or symptoms of a present printer system malfunction includes downloading the error log from the printer system.**

- The Maekawa reference does not explicitly disclose the use of an error log.  
However, as mentioned above in claim 2, the Hamilton reference discloses the use of fault logs. The downloading can simply mean the transferring of the log from the printer system to a computer. The Maekawa reference can support this through the telephone network used for communication between the “user” and “center” sides.
- Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have an error log transfer mechanism. The motivation would be to allow easy comparison of errors with items in a database.

#### 16. Claim 16

The system of claim 15, where

- **comparing the one or more symptoms of a present printer system malfunction to the database correlations includes comparing the error log to the database correlations.**
- Please note the discussion of the second limitation of claim 13 above. Although it is not explicitly stated to compare the error log, it would make sense to one of ordinary skill in the art to do so since error logs provide detailed explanations of errors that have occurred.
- The examiner would also like to note that the comparison of symptoms with known causes is widely used in many aspects (i.e. technicians compare

Art Unit: 2622

symptoms with known system problems, doctors compare symptoms with known diseases, etc.)

VI. Claims 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maekawa et al (U.S. Patent No. 5,386,271 – “Maekawa”).

**17. Claim 17**

**The system of claim 13, where**

- **reporting the most appropriate malfunction includes electronically transmitting a report.**
- Maekawa discloses in Fig. 22 and column 12, lines 57-62 that a report is displayed. One skilled in the art would know that such a report can be sent to a user if needed. The motivation would be to allow a user to see possible solutions to a error that has occurred. Also note the rejection to claim 8 above.

**18. Claim 18**

**The system of claim 13, where**

- **reporting the most appropriate malfunction includes a service procedure recommendation.**
- Maekawa, discloses in column 4, lines 35-38, that there is a PM counter that keeps track of part usage, and if the parts need replacement. One skilled in the

Art Unit: 2622

art would understand that one can simply note information from this counter if a part replacement would be a likely solution to a malfunction. Please also note Figs. 22 and 25 in which "measure to be taken" is provided with errors that have occurred.

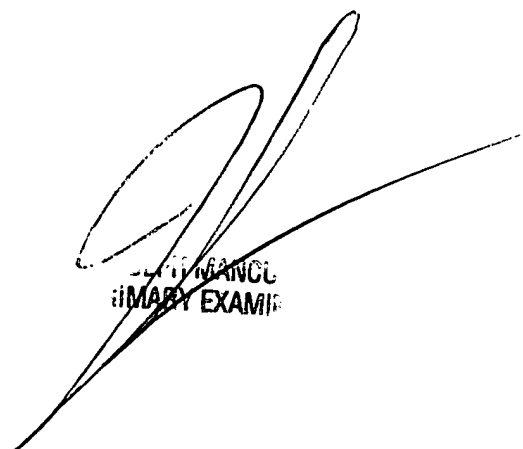

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yixing Qin whose telephone number is (571)272-7381. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Coles can be reached on (571)272-7402. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
